	A letter from Director General – ICAR addressed to the Secretary, CIB&RC has been received to expedite the applications for registration of pesticides for the control of nematodes. APPA & Secretary informed the house that the matter has also been raised during the CCPR meeting last year. It was informed that to facilitate label expansion of such pesticides on some frequently consumed vegetables for which ICAR has generated terminal pesticide residue data, a committee was constituted under Chairmanship of ADG(PP), ICAR to provide bioefficacy data. ADG (PP), ICAR informed that committee has compiled the bioefficacy and pesticide residue data on specific pest-pesticide-crop combinations and list attached at Annexure-11.3.1 . The RC decided that data may be examined by the Sectt. of CIB&RC on priority for consideration of their label expansion and fixation of MRL, as compliance for risk assessment by JMPR and fixation of Codex MRL.

Annexure – I**Sub: Additional suggestions given by the participating Colleges in the Study Protocol on pesticides reviewed for its continued use or otherwise in the country- Mancozeb:****I. Suggestions by Baroda Medical College on:**

A. The Study design of Manufacturing site of UPL at Jhagaria (Factory A) regarding inclusion criteria. They want to select Controls i.e. non exposure group from same (Vapi - non-chemical site) geographical area and matched for age (5 years group) and gender to eliminate the possibility of background prevalence of goiter influencing the results since the Plant falls under a goiter belt.

B. Approx. 75 total number workers would be tested by them against 50 suggested in the already approved protocol. Control (Non-exposure group) on same number of workers (i.e.25, as given in original protocol) from non chemical factories/ community not located in near vicinity of UPL plant.

C. Objective

1. To study prevalence of thyroid dysfunction amongst the workers exposed and not-exposed to Mancozeb, they suggested to undertake additional studies as follows:

- a. Environmental monitoring of Jhagaria plant to validate available data.
- b. Try biological monitoring (ETU metabolites in the urine) of workers working in Jhagaria plant UPL to provide Information on: total 75 workers of Mancozeb plant, those who left the job in one year (to see the healthy worker effect) for review and on the flow chart of the plant along with raw materials, intermediate and final products, also processed details in brief.

2. To study any other health effects of Mancozeb, they would consult MSDS. In addition they are advised to consult information from Pesticide Manual also.

II. Suggestions by Surat Medical College

A. Study design of Manufacturing site of M/s Agricare at Panoli (Factory C) (involved only in packaging). The team visited, only packaging unit and observe that the direct exposure was only to workers involved in charging of Mancozeb in blender (Exposure to Mancozeb dust while packaging and weighting). The plant was seasonal,

hence limited to exposure to mancozeb for just 3 months in a year. Workers were sent to other chemicals plants for rest part of the year and most of the workers were staying in hostel away from family members, therefore thyroid profile cannot be attributed just to mancozeb exposure.

B. Approx. 50 (workers -all types & family member) were approved in the protocol for testing the thyroid profile. The team observed that there were about 25 workers in the plant, only 6 permanent, and rest contractual on rotation to manufacture of other chemicals in the same company. It will be difficult to complete the target of 50 workers.
