6.5	Consideration of an application of M/s Anu Products Ltd., for registration of <i>Paraquat dichloride Technical 42% min.</i> for Technical import (TI vs TIM) u/s 9(3).
	RC deliberated the agenda that deferred for want of Bio-efficacy data as per decision of 413 th RC at agenda item no. 6.6.
6.6	Consideration of an application of M/s P. I. Industries Ltd., for grant of registration for indigenous manufacture of <i>Dinotefuran Technical 99.10% min. (w/w)</i> (TI) under section 9(3).
	<p>Committee deliberated the agenda and noted that:</p> <ol style="list-style-type: none"> 1. During application submission for dinotefuran 20% SG in formulation import category in CIB&RC vide file no 1-FI/9(3)/2010-CIR-II, the applicant M/s PI industries had submitted technical support data at the purity of 97% min w/w along with six impurities. 2. RC noted that in the instant application (F.No.7783-TI/9(3)/2016-CIR-II) the applicant has enhanced a.i @99.1% and decreased 2 impurities and also percentage of each impurities from 0.5 to 0.1% and one new impurity in the form of Water 0.2% max in the chemical composition was shown with the remark that from manufacturer (MCAG) when they applied to the Japanese Registration Authority for the registration of Dinotefuran technical in 2002, their product used to contain six impurities. 3. In response to a query regarding discrepancy in the earlier claimed purity during

registration of FI and the newly claimed purity of 99.1 % the applicant had submitted a letter issued by M/s Mitsui Chemicals Agro Industries dt 1.7.2011 that in the past about 4 years they had carried out many improvement in their manufacturing process, on the basis of which they had been able to completely eliminate two impurities. These two impurities have been excluded by them in the chemical composition of Dinotefuron technical.

4. The claim for purity remained and accepted at 97% min w/w at the time of registration of formulation even though the Analytical Test Report of 5-batch analysis from independent lab i.e. Japan Analytical Chemistry Consultants Co., Ltd, Japan (page 3 of 53) showed the content of active ingredient in the range of 99.94 % - 100.5% with 6 impurities viz. DMNG < 0.01 % - 0.03%, FNG < 0.01 % , 2-MTI-446 < 0.01, DFNG < 0.03- 0.08%, FMPZ < 0.01% and FPZ was < 0.01 %. The specified limits for active ingredient and impurities during early stage are not only set solely based on the statistics of the 5-batch analytical data, and are generally defined with a certain safety margin to account for the range of values observed in practice.
5. RC also observed that the Firm has clarified that Mass balances of Dinotefuran Technical is between 990 and 1006 g/kg and no unidentified impurities ≥ 1 g/kg has been reported. The same is in consonance with information available in the FAO Manual on Dinotefuran. The firm further clarified that their product Dinotefuran is free from Nitrosamine which are reasonably anticipated as human carcinogen.
6. RC also noted the clarification of the firm that their product is free from Nitrosamine which is anticipated as human carcinogen and presence of Nitrosamine, reasonably anticipated as human carcinogen, in other compounds and concerned raised by DGC I & FAO.
7. On similar analogy FAO raised concerns about the potential formation of Nitrosamine during the manufacturing of Dinotefuran. However, Dinotefuran Manufactured by Mitsui Chemicals Agro Inc. (MCAG), JAPAN is free from Nitrosamine. The firm submitted that the original manufacturer of Dinotefuran Mitsui Chemicals Agro Inc. Japan (MCAG) has clarified that reactions of secondary amines with nitrate salts or reduction reaction of N- Nitro compounds did not occur in the starting materials or during manufacture of Dinotefuran technical. Therefore formation of Nitrosamine is excluded in the manufacturing process of Dinotefuran.
8. The firm has clarified the MCAG is consistently manufacturing Dinotefuran of minimum purity 991 gm/kg and maintained the other toxicologically non relevant impurities as below detectable limits. This eliminates possible formation of Nitrosamine in the Dinotefuran produced by MCAG thus ensuring safety of the Product.
9. FAO has also published Dinotefuran Technical specifications based on an evaluation of same data package submitted by MCAG, the Dinotefuran content is declared as 99.1% min (FAO specification 749/TC, March 2013). In support during presentation made by applicant on 15 Nov 2019 in the 411st RC meeting, they submitted "FAO specifications and evaluations for agricultural pesticides – Dinotefuran".
10. The principal company Mitsui Chemical Agro Inc. has submitted information on

	<p>toxicology pack which has been globally accepted. RC also noted that globally Dinotefuran Technical is registered at 99.1% min such as 99.6% in USA, 99.1% in EU, 99.0% in Australia, 99.1% in China, 99.0% in Pakistan and 99.1% in Guatemala. It is also evident that source available globally for Dinotefuran Technical is at 99.1% min.</p> <p>11. Global registration of Dinotefuran TG by Mitsui Chemical Agro Inc. utilizing common toxicological data package having purity claim of Dinotefuran TG 99.1% and is in line with global standards set by FAO for Dinotefuran Technical 99.1% (Source: “FAO specifications and evaluations for agricultural pesticides – Dinotefuran”)</p> <p>12. Certain toxicity studies were carried out using Dinotefuran technical which having purity lower than proposed specification due to the content of water. Due to the safe logistic and handling purpose, the manufacturer has added water to Dinotefuran technical to the purity of 96.5% homogenized and used as test material. No impurities other than water (2% of water, small amount of organic solvents) was added to the Dinotefuran technical for test material. Calculated content of active substance as dried test material was approximately 99.1% min purity (on dried basis). The test material handling were according to Corning Hazleton Inc. Wisconsin, Standard Operating Procedures (SOP).</p> <p>13. RC appreciated the fact that Dinotefuran manufacturers intend to maintain high purity to avoid formation of toxicologically unsafe and possible human cancer causing impurities and derivatives of nitrosamines.</p> <p>14. In the interest of safety, efficacy and shelf life stability, RC has always encouraged to register the pesticides with higher possible purity.</p> <p>In view of the above RC approved the application for grant of registration for Technical import of <i>Dinotefuran Technical 99.1% min.</i> from M/s Mitsui Chemicals Agro Inc. (MCAG), Japan with a provisional shelf life of one year.</p>
6.7	<p>Consideration of an application of M/s UPL Ltd., for grant of registration for indigenous manufacture of <i>Metolachlor Technical 97.0% w/w min.</i> (TIM vs TIT) under section 9(3).</p>

	<p>The RC noted that the min. purity claimed by the applicant for technical is 95% min., while toxicity data on many parameters have been submitted on higher purity and in case of reproduction toxicity and carcinogenicity with technical of 99% purity. The applicant may be asked to submit the justification for applicability of this data (generated on technical of higher purity) to assess the hazard/risk for the product to be manufactured in practice from the technical of 95% min. purity.</p>

10.2	Consideration of application of M/s PI Industries Ltd., for grant of registration for import of Pheromones <i>PB Rope L (Gossyplure)</i> under section 9(3).
	RC deliberated the agenda in detail considering the following which includes excerpts of 395 th RC& 404 th RC recommendations also: I. Product PB Rope L (Gossyplure) is already approved for registration by the RC in its 211 th meeting under section 9(3b). II. Pink Boll Worm (PBW) is a serious pest of cotton, and pheromone based mating disruption technology in IPM strategies for managing the pest assume importance and priority consideration (391 st RC meeting).

- III. The existing guidelines provides that as regards formulation, no data are required unless it is added with some other pesticide. As per guidelines, the requirement of various data for registration of technical pheromones should be determined on case to case basis considering chemistry, use pattern & toxicity of the pheromones.
- IV. RC noted that the applicant has submitted a certificate declaring authenticity of the sample and the toxicological studies which included Acute Oral Rat, Acute dermal rat, Acute inhalation rat, Primary skin irritation Rabbit, Irritation to Mucous membrane, Skin sensitization to guinea pig, toxicity to bird (northern Bobwhite) toxicity to fish (Rainbow trout) and mutagenicity AMES Test.
- V. RC also noted that as per Bioefficacy data and ICAR comments, the use rate for Gossyplure (PB Rope L/PB Knot) is 140 gm a.i. in an area of 10 hectares and hence the low use rate per acre below 150 gm a.i. (as indicated in guidelines) is established. The guidelines also clearly state that Pheromone used in solid matrix dispenses and having low annual use rates can be waived of sub-chronic toxicity studies, developmental toxicity studies and immunotoxicity studies.
- VI. Further RC also observed that as per guidelines, the Lepidopteran Pheromones that are naturally occurring compound designated by an unbranched aliphatic chain (between 9 and 18 carbons) ending in an alcohol, aldehyde or acetate functional group & containing upto 3 double bonds in aliphatic backbones can be exempted from sub-acute toxicity carcinogenicity, effect on reproduction & metabolism if their use rates do not exceed 150 gm/acre/year with good agricultural practices. As such the product qualifies for exemption as approved in 395th RC.
- VII. RC also noted that similar substances have been exempted earlier by RC from the requirement of registration for IPM programmes for reducing population of pests (Stem borer) as per Agenda Item No. 2.2 in its 293rd meeting held on 26.09.2008.
- VIII. For mass trapping this pheromone trap is already in use and nothing adverse has been heard. Moreover, pheromone is not directly applied on plants.
- IX. The representatives of M/s PI industry had made presentation regarding the use rate of PB Rope L for 10 ha. and 25 ha. has been clarified to the satisfaction of Registration Committee.
- X. The recommendations of Dr. Rehan sub-committee were also discussed and found that guidelines were cited clearly and it was also mentioned that since the applicant has submitted OECD guidelines in support of the waiver of the teratogenicity an immune toxicity studies, it mentions that waiver of the studies may be granted if the repeated dose toxicity of the group is described and submitted.
- XI. Since available sub chronic toxicity studies of SCLP in rat did not show evidence of immunotoxic effects, such as altered WBC,differential count, albumin globulin ratio & organ weights and histopathology of immune organs such as thymus, spleen and lymph node, waiver for detailed immuno toxicity studies is granted. Such a waiver is granted by regulators such as OECD members and EPA also.

	<p>XII. If toxicology data is available on parameters which are reviewed by FAO and other similar international bodies, there is no need to repeat such animal studies again keeping in mind the Animal Welfare regulations and such repeat studies are unlikely to provide any new information that is currently not available on the said molecule and risk assessment was duly made.</p> <p>XIII. The product was approved in 395th RC with the condition to submit specified data/information on toxicity aspects to the satisfaction of RC.</p> <p>XIV. The applicant has submitted report of AMES test report and as per the recommendations of Dr. Rehan Committee, the applicant has submitted the battery of three tests to ascertain non-mutagenic potential which shows that the product is non-mutagenic. There is no adverse report triggered, therefore long term studies not required.</p> <p>RC deliberated the agenda in light of facts mentioned above and concluded that as per guidelines for registration of insect pheromone clearly state that Pheromone used in solid matrix dispenses and having low annual use rates can be waived of sub-chronic toxicity studies, developmental toxicity studies and immunotoxicity studies. The applicant has submitted report of AMES test and the battery of three tests to ascertain non-mutagenic potential which shows that the product is non-mutagenic. Moreover, Lepidopteran Pheromones that are naturally occurring compound designated by an unbranched aliphatic chain (between 9 and 18 carbons) ending in an alcohol, aldehyde or acetate functional group and containing upto 3 double bonds in aliphatic backbones can be exempted from the sub-acute toxicity carcinogenicity, effect on reproduction and metabolism if their use rates do not exceeds 150 gm/acre/year with good agricultural practices. RC also noted that for mass trapping this pheromone trap is already in use and nothing adverse has been heard. Moreover, pheromone is not directly applied on plants.</p> <p>RC deliberated the agenda in light of above facts and decided to approve registration for formulation import of Pheromones PB Rope L/PB Knot (Gossyplure)Hexdecadien-1-yl acetate 47.4% w/w min and ZE-7,11-Hexdecadien-1-yl acetate42.7% w/w min under section 9(3) FI from M/s Shin Etsu Chemical Ltd., 6-1, Ohtemachi 2- Chome, ChiyodaKu, Tokyo, Japan.</p>

	<p>RC deliberated the agenda and perused the email communication dated 24.04.2020 & 27.04.2020 and observed that, both – Patents and Insecticides Act are complete codes and operate in different fields. All issues respecting the patents, their grants, enforcement and preventing others from act of making, using, selling or importing patented products are governed by the provisions of Patent Act, 1970. RC further is of the view that the patent rights are private rights and the Registration Committee constituted under Insecticides Act, 1968 Act is not a forum to enforce a private right which is exclusively in domain</p>

	<p>with the Patent Act.</p> <p>It is not the purview of Registration Committee to analyze the rights of patentee which is neither permissible nor desired as per existing provision of both Acts. RC desired that as per the email communication and the letter of M/s FMC dated 11.03.2020 may be verified and appropriate steps be taken by the Sectt. of CIB&RC in accordance with law/procedure.</p>
