2.0	<u>Presentation</u>
2.1	Presentation by M/s Crystal Crop Protection Pvt. Ltd., for registration of <i>Glufosinate ammonium Technical 95% w/w min.</i> for new source-revival of application.
	<p>A presentation was made by the representative of M/s Crystal Crop Protection Pvt. Ltd., and following facts appeared:</p> <ul style="list-style-type: none"> • Metabolic pathway will not change as chemical structure of molecule is not getting altered during new/alternate source registration. • As per EPA and EU guidance additional livestock metabolism are only required for different types of product applications (for direct application to animal skin, for example) or for special plant metabolites which are not identified in rat metabolism studies • Information are in public domain. Repeating a study will be in contravention to the Animal Protection laws. • RC also noted that date of Submission of application in hard copy was 12.05.2015 and date of Initiation of toxicology studies was 17.10.2011. Toxicity to Livestock Study – Non- GLP study was conducted on 04.03.2013. • In 351 RC (30.09.2014, Agenda 3.5) It was decided to accept Guidance document on Toxicology, which shall come into force for the Toxicity studies initiated on or after 01.01.2015. Until then, there was no requirement of Metabolism to Livestock study. • In 381st RC (06.12.2017, Agenda 1.1 – Annexure I) - New Guidelines were introduced under the caption for “Registration of Chemical pesticides u/s 9(3) and Technical Indigenous Manufacture u/s 9(4)” where Feeding studies on Livestock including Metabolism in livestock is R/NR u/s 9(3) – TI, 9(3) TIM & 9(3) TI – New Source. However, in 384th RC held on 16.01.2018 vide Agenda Item No. 1.0 Confirms that Annexure – I and Annexure – II of Agenda Item No. 1.1 shall not be given effect to and subject to the final outcome of the writ/petitions/appeals. • It was also appraised that the waiver to similar kind of applications were granted in the past (Agenda Item No. 6.5 of 293rd RC and 6.22 of 387th RC). • The applicant generated data in the year 2011-2013 for all the required Toxicology studies as per the existing guidelines and submitted only one Contact Toxicity to Honeybees study only as per requirement of old applicable guidelines therefore Oral toxicity studies were not conducted (as per the decision of 351st RC, Agenda 3.5 applicable for toxicity studies initiated on or after 1st January 2015). • CIB & RC has not framed any protocol for conducting Livestock study (Dietary Feeding). Several toxicity studies on livestock have been carried out by the Principal scientist based on in-house protocol and subsequently submitted for registration.

	<ul style="list-style-type: none"> Historically in India, Pesticide registrations have been granted by accepting metabolism studies in livestock when the molecule is being registered for the first time in the country. Since the safety and efficacy of the product had already been evaluated and ensured by the original registrant. Being the subsequent registrant deserve for exemption. <p>Considering above facts RC allowed the waiver and directed Secretariat for bringing complete agenda in next RC.</p>
2.2	Presentation by M/s Biostadt India Ltd., regarding return back of original certificate of Thiophanate methyl 70% WP without deleting any crop.
	Applicant made the presentation before RC regarding delay in submitting the original CR for deletion of label claims as per notification. RC deliberated the issue and directed the applicant to furnish the reasons for delay in submitting the CR. The RC further directed that applicant should submit an undertaking that such mistake will not be repeated in future. The applicant submit relevant documents within a week which may be put up to the next RC for decision in the matter.
2.3	Presentation by M/s E I DuPont India Pvt. Ltd., regarding approval of protocol for microbe's studies (Paddy and Soybean)
	Applicant made the presentation before RC regarding delay in submitting the protocol on microbe's studies (Paddy and Soybean). RC deliberated the issue and directed that applicant should submit in writing regarding the reasons for delay in submitting the same and further applicant should undertake that the such mistake will not be repeated in future. Moreover, the protocol should be scrutinized on priority.

4.0	<u>Export Cases</u>
4.1	List under section 9(3) Export applications
	Committee deliberated the agenda and approved the case as per Annexure 4.1.1, 4.1.2, 4.1.3 & 4.1.4 . It was reiterated that the application of import for export category shall be subject to the decision taken by the committee in its 356 th meeting. It was also directed to strictly follow Gazette Notification SO 3951 (E) dated 08.08.2018 published on 09.08.2018 of Ministry of Agriculture and Farmers Welfare while issuing approvals.
4.2	Consideration of application of M/s Arysta Life Science India Ltd for grant of registration of <i>Endothall Technical 80% w/w min</i> for indigenous manufacture for export only u/s 9(3).
	Committee deliberated the agenda and approved the registration of <i>Endothall Technical 90% w/w min</i> for indigenous manufacture for export only under 9(3) export with the condition that the color of toxicity triangle should be bright red in color and precautionary remarks should be in bold letters.
5.0	<u>9(3B) Cases</u>

5.1	Consideration of application of M/s Jay Research and Biotech India Pvt. Ltd., for grant of registration for indigenous manufacture of bio-pesticides <i>Verticillium chlamyosporium</i> 1% WP u/s 9(3b).
	RC deliberated the agenda and rejected the case as the test report for molecular identification of microbial culture and DNA sequencing of the strain from ICAR – NBAIM did not match and was found from the different species <i>Sarocladium strictum</i> .
6.0	<u>9(3) CASES</u>
	<u>9(3) Chemicals</u>
6.1	Consideration of an application of M/s Syngenta India Ltd., for grant of registration for indigenous manufacture of <i>Pyrifthalid</i> 31.0% + <i>Bensulfuron methyl</i> 15.7% SC under section 9(3).
	The RC deliberated the agenda and approved for grant of Registration of <i>Pyrifthalid</i> 31.0% + <i>Bensulfuron methyl</i> 15.7% SC u/s 9(3), under Formulation Indigenous Manufacturing (FIM) category for use in transplanted rice for control of <i>Echinochloa</i> spp., <i>Cyperus</i> spp., <i>Spenochleazylanica</i> , <i>Ludwizia</i> spp., <i>Ecilpta</i> alba, <i>Marsilia</i> spp. and <i>Fimbristylismiliaceae</i> subject to fixation of MRL of <i>Pyrifthalid</i> on rice crop. The MRL of <i>Bensulfuron methyl</i> on rice crop is already fixed. A cautionary statement “Product is toxic to fish and aquatic organisms; its use may be avoided near aquaculture” may be added in Label/Leaflet.
6.2	Consideration of an application of M/s Syngenta India Ltd for grant of registration for import of <i>Bensulfuron methyl Technical</i> 97% w/w min. u/s 9(3) New source.
	<p>RC deliberated the agenda and observed that the applicant has completed data requirement of Chemistry, Bioefficacy, Packaging and Legal for consideration of application for grant of registration of <i>Bensulfuron methyl Technical</i> 97% w/w min. under section 9(3) TI for import manufactured by M/s Jiangsu Repont Agrochemical Co. Ltd China. It was mentioned that one more invitro study on mutagenicity, toxicity in live stock is not as per the protocol approved by the RC and label leaflets needs amendment as per Gazette Notification.</p> <p>The issue was deliberated and following points emerged:</p> <ul style="list-style-type: none"> • As per guidelines for new source registration, three battery of studies (2 in vitro and 1 in vivo) have been accepted by RC and accordingly submitted by the applicant. Four studies (3 in vitro, 1 in vivo) is actually insisted when the molecule is being registered first time to the country. • In the past pesticide registrations have been granted by accepting metabolism studies in livestock when the molecule is being registered for the first time in the country while the subsequent registrations of same molecule under "New source category" have been granted , without new metabolism study, by the Registration Committee for innumerable number of cases based on Acute dietary feeding study done in goat, conducted generally in India. • New metabolism study in case of new source registration does not make any scientific relevance as Metabolic pathway will not change as chemical structure of molecule is not getting altered during new / alternate source registration , therefore metabolism studies are not required while registering new/ alternate source. • It was also mentioned that in the field residue studies with <i>Bensulfuron</i>, no quantifiable residues (at detection limit of 0.01 mg/kg) could be detected in rice grain and straw. So

	<p>it is practically Zero residue situation due to long waiting period (interval between spray and harvest).</p> <ul style="list-style-type: none"> • Assessment Report that is supporting the European registration of bensulfuron-methyl depicts that livestock feeding studies are required when significant residue (>0.1 mg/kg of the total diet received) occur in crops fed to animals. Therefore, based on Indian residue study's findings with Bensulfuron methyl, livestock acute dietary feeding study is scientifically not relevant since residue level in paddy straw is 10 times lesser than the trigger value of 0.1 mg / kg , as residues in fodder under Indian studies have been found below detectable limit (< 0.01 mg/kg). • RC in 345th meeting has granted complete waiver for toxicity to livestock data while granting new source category registration approval, waiver is granted based on the logic that such information is already available on public domain (EU Bensulfuron methyl Monograph). • RC also took note that animal ethical committee raises concern to discourage repetition of experiments on higher animals. <p>Considering above mentioned points RC allowed the waiver and approved for grant of registration for import of Bensulfuron methyl Technical 97% w/w min. u/s 9(3) New source.</p>
<p>6.3</p>	<p>Consideration of an application of M/s Syngenta India Ltd., for grant of registration for import of <i>Pyrifitalid Technical 98% w/w min. under section 9(3).</i></p>
	<p>RC deliberated the agenda and approved for grant of registration for Import of <i>Pyrifitalid Technical 98% w/w min. under section 9(3) TI</i> for import manufactured by M/s –Synwill Nantong Chemical Co. Ltd , No.20, 4th Haibin Road, Rudong Coastal Economic Development Zone Nantong city, Jiangsu Province, P.R- China.</p> <p>Discussion took place on waiver for acute neurotoxicity and sub acute inhalation and following facts appeared:</p> <p><u>Acute Neurotoxicity:</u> According to Indian guidance document on toxicology (page 219), acute neurotoxicity rodent study is required only based on the WoE (weight of evidence) and cause of concern approach, considering the following :</p> <ul style="list-style-type: none"> • Compound if belongs to known neurotoxic class or with identified structural relationship with known neuro-toxicants. • Single dose acute / Repeated dose sub acute / sub chronic tox studies have not taken into account the Functional Observation Battery & Histopathology of relevant organs. <ol style="list-style-type: none"> a. It was found that applicant has submitted repeat dose 90 day neurotoxicity study which represents worst case scenario as in stead of single feeding (acute feeding), sub acute 90 days repeat dose study has been done and results revealed the lack of any effect related to neurotoxicity and neuropathology which gives strong evidence that pyrifitalid is devoid of acute and subacute neurotoxic potential. b. An acute oral neurotoxicity study with pyrifitalid is thus has not been required globally as no indication that the compound has any acute neurotoxic potential of neurotoxicity and neuropathology as indicated in 90 days study. c. Additionally, sub-acute oral rat (90 days oral feeding) study wherein administration of Pyrifitalid to rats at least 91 consecutive days was well tolerated and no effect on

	<p>neurotoxicity assessment, including Functional Observation Battery & Histopathology of relevant organs reported to be unaffected by pyrifitalid treatment.</p> <p>Sub-acute inhalation:</p> <ul style="list-style-type: none"> • The Vapour pressure of pyrifitalid indicates negligible volatility meaning negligible risk to operators, with similar reasoning number of registrations have been granted by Indian Registration committee in the past. This is very commonly accepted global approach which is aligned with OECD guideline and our data requirement is harmonized with OECD. • As per Tox guidance document, sub-acute inhalation study is not required, if vapour pressure is low i.e. $<1 \times 10^{-2}$ Pa under practical temperature conditions . In case of Pyrifitalid the vapour pressure is 2.2×10^{-8} PA (at 25^oC) and under worst case Indian climatic condition of incredibly high temperature extrapolations to 55 ^oC it is yet 5.1×10^{-6} PA, which is almost negligible as compared to given trigger limit. • Acute inhalation data also indicated that Pyrifitalid is not toxic via inhalation route. • Pyrifitalid qualifies for complete study waiver based on the criteria published in the Indian Guidance Document 2017, and also approved by RC. • Moreover, conducting sub acute inhalation study repeatedly will be in contravention to the Animal Protection laws. <p>Considering above mentioned points RC allowed the waiver and approved for grant of registration for import of Pyrifitalid Technical 98% w/w min. under section 9(3).</p>
6.4	Consideration of an application of M/s Crystal Crop Protection Pvt. Ltd., for registration of Gibberellic Acid Technical 90% w/w min. under Technical import category (TI vs TIM) u/s 9(3).
	RC deliberated the agenda and decided that all Gibberellic 0.001% L related approved cases should be reviewed at the level of Secretariat and directed DD(WS) to present all relevant facts in the next RC and If needed applicants may be invited for presentation suggesting corrections in label/leaflets.
6.5	Consideration of an application of M/s Krishi Rasayan Exports Pvt. Ltd., for grant of registration for Technical Import of <i>Gibberellic acid Technical 90% w/w min.</i> under section 9(3) TI vs TIM category.
	RC deliberated the agenda and approved for grant of registration for Technical Import of <i>Gibberellic acid Technical 90% w/w min.</i> under section 9(3) (TI vs TIM) for import manufactured by M/s Zhejiang Qinjiang Biochemical Co. Ltd., Add: 598, Xishan Road, Haining Zhejiang, China and supplied by M/s Shanghai Agrotree Chemical Co. Ltd., Add: Room B515, No. 2250, South Pudong Road, Pudong, Shanghai 200127, P. R. China.
6.6	Consideration of an application of M/s Indogulf Cropscience Ltd., for grant of registration for Technical Import of <i>Azoxystrobin Technical 97% w/w min.</i> under section 9(3) TI vs TIM category.
	RC deliberated the agenda for grant of registration for Technical Import of <i>Azoxystrobin Technical 97% w/w min.</i> under section 9(3) (TI vs TIM)for import manufactured by M/s Shandong Hailir Chemicals Co. Ltd., Lingang Industrial zone, CoastalEcon, Development Zone, Weifang, Shandong, China. The registration committee was apprised that the study on acute oral mice was conducted from non-GLP certified lab/ non-GLP principles. It was also noted that non GLP studies acute oral mice were completed on 5.5.2014 and were in order as per 351 RC (30.09.2014,

	<p>Agenda 3.5) applicable for the Toxicity studies initiated on or after 01.01.2015. It was also found that Acute oral studies conducted at GLP lab was satisfactory.</p> <p>RC approved the agenda for grant of registration for Technical Import of Azoxystrobin Technical 97% w/w min. under section 9(3) (TI vs TIM).</p>
6.7	<p>Consideration of an application of M/s Sulphur Mills Ltd., for grant of registration for indigenous manufacture of Fipronil 0.6% WG under section 9(3) FIM.</p>
	<p>RC deliberated the agenda and approved for grant of registration for indigenous manufacture of <i>Fipronil 0.6% WG</i> under section 9(3) for the control of Yellow Stem Borer in the crop Rice and cautionary statement incorporate on label leaflet as “The product is highly toxic to bees when exposed to direct treatment and thus should be avoided during foraging period of bees. The product is highly toxic to aquatic invertibrates and may be avoided near aquaculture”.</p>
6.8	<p>Consideration of an application of M/s BASF India Ltd., for grant of registration for import without registering technical of <i>Flocoumafen 0.005% BB (Strom)</i> under section 9(3) FIM.</p>
	<p>Committee deliberated agenda and approved for grant of registration for import without registering technical of <i>Flocoumafen 0.005% BB</i> under section 9(3) FIM for the control of rodents (<i>Rattus rattus</i>, <i>Bandicota bengalensis</i>, <i>Tatera indica</i> and <i>Mus musculus</i>) in field, storage and residential premises. A cautionary statement incorporate on label leaflet as “Rodenticide baits and dead rodents can be attractive to mammals and are therefore hazardous to domestic animals and to wild life. Product is toxic to fish and aquatic invertebrate and thus the product may not be used near aquaculture”. The product should be issued bright red triangle.</p>
6.9	<p>Consideration of an application of M/s Shogun Organics Ltd., Mumbai for grant of registration for indigenous manufacture without registering technical of <i>Renofluthrin 5% w/w MUP</i> under section 9(3) FIM of the Insecticide Act, 1968</p>
	<p>The committee invited the external toxicology expert to seek some clarifications in respect of the report submitted by him. RC deliberated and expressed that this is a public health product and will be used in house and hospitals where pregnant women, infants, children, patients, age old people will get exposure to it and therefore critical analysis on toxicological parameters is needed.</p> <p>The committee on perusal of comments of the external expert found that i) the scientist has recommended to waive off sub-acute oral toxicity Dog and Metabolism study. The reason given is that toxicity to livestock in goat has been submitted, hence, sub-acute oral dog can be waived off. It may be clarified that whether information on all aspects as derived from sub-acute oral dog can be derived from the study given on toxicity to livestock. Further, whether with the studies available in the dossier of Renofluthrin technical, bridging can be undertaken for the metabolism study for Renofluthrin. What would be the observations for the profile of renofluthrin metabolism? It is relevant to mention that the acute (oral) toxicity of Renofluthrin is higher (acute oral LD50 cut off 300 mg/kg body wt.) than transfluthrin (acute oral LD50 > 5000MG/KG BODY WT.) OR Metofluthrin (acute oral LD50 >2000mg/kg body wt.). How these difference can be explained?</p>

	<p>ii) Whether data generated for the first time in the laboratory without standardization/performing any studies earlier on neurotoxicity can be accepted and relied upon for the regulatory purpose. There is need to look into the quality of data with context to safety.</p> <p>iii) The comments indicate that the study conducted in 30 Cu meter room after burning Renofluthrin Mosquito coil observed air conc. of renofluthrin 0.00012;0.00014 and 0.0000014 mg/l at 1,6 and 11 hrs. The drastic decrease in the concentrations at 11 hrs. observed as compared to 1 and 6 hrs need explanation/clarification.</p> <p>During the RC meeting, external expert was requested to provide recommendations on the safety of the product based on the toxicity data submitted by the applicant, for the purpose of the registration for use in the country by the general public for mosquito control. However, no specific recommendations could be provided.</p> <p>In view of above, he was requested to provide clear comments on these aspects as mentioned above along with the recommendations and risk assessment for safety of the product as the approval is to be given by the Government for use by the general public wherein all age group people including infants, children, geriatric(old age) and immuno-compromised people will be exposed.</p> <p>On queries raised by members on above points, the third expert agreed that the case is yet to be examined for ensuring safety as per toxicological guidelines. The quality of the data is also required to be ascertained for deciding the safety and risk. The external expert agreed for re-examining the case in light of committee observations.</p>

	RC deliberated the agenda in detail and it was observed that the study submitted by the applicant did not qualify as per the existing guidelines/protocol. Hence, RC did not approve the case and the file is closed.
10.26	Follow up action of the minutes of 423rd RC vide agenda item no. 10.25 & 422nd meeting vide agenda item no. 10.47 and 420th RC 2.5, 2.8, 2.9, 2.10, 2.11 on the issue w.r.t. AMES test for 9(4) TIM.
	<p>The presentation was made by the representative of the all five firms in 420th RC (Agenda 2.5,2.8, 2.9, 2.10, 2.11). M/s Bharat Rasayan Ltd., Tolfenpyrad Technical 98% w/w min.; M/s Astec Life Science, Paclobutrazole Technical 95%w/w min.; M/s Coromandal International Ltd., Quizalofop ethyl Technical 98% w/w min.; M/s Godrej Agrovet Ltd., Metribuzin Technical 88% w/w min. and M/s Ichiban Crop Science, Hexaconazole Technical 92% w/w min.</p> <p>Following facts were noticed in light of 420th RC and from further deliberation in this RC.</p> <ol style="list-style-type: none"> 1. In response to query that product could not be compared point to point in mutagenic studies as it showed cytotoxicity at a lower dose as compared to the 9(3) registrant, the applicant was asked to clarify that how their product can be considered equivalent to 9(3) registrant. <ul style="list-style-type: none"> • The question of end point to end point results of AMES test and possible reasons for differences in cut off cytotoxicity were explained with reference of FAO Manual. • Results of AMES test are compared by end point to end point between the test substance and reference substance (9(3) registrant as per FAO (Manual on development and use of FAO and WHO specifications for pesticides- Pesticide specifications, F 3.4, page 28). • AMES data generated on 9 (4) applicant is from GLP CRO and followed stipulated test guidelines TG 471,OECD Guidelines for the Testing of Chemicals, Section 4, p 1-11. RC noted that AMES data developed from GLP lab is more authentic and is widely acceptable and is found non mutagenic in results. • Detailed verification of data from CRO has unequivocally shown the technical manufactured is non-mutagenic and results are in line matching with registered technical by end point to end point comparison as per FAO guidelines (Manual on development and use of FAO and WHO specifications for pesticides- Pesticide specifications, F 3.4 page 28). 2. In support to their case scientifically, applicants were asked to submit another <i>in-vitro</i> test (<i>in-vitro</i> chromosomal aberration study) and one <i>in-vivo</i> test (Mammalian erythrocyte micronucleus assay). A point was also raised for clarification that international guidelines are based on 5 batch analysis mostly as compared to 1 batch analysis.

	<ul style="list-style-type: none"> • It was explained that additional studies are not required to be submitted for 9(4) TIM registration, which is me too registration and original registrant data in 9(3) are more detailed. • According to 9(4) TIM guideline 381 RC, page 11, point 46, only AMES test 1st tier is needed and also described in 371 RC, page 16, point 4 that AMES test 1st tier shall replace all toxicological data requirements in case of TIM u/s 9(4). In both of guidelines, no where it is mentioned that results of AMES should be point to point. • It was also described by chemistry expert that if chemical equivalence has been established, as per existing guidelines mutagenicity study is not required. Under such conditions additional studies are not required. In present cases CC is matching and sample verified by CIL. • The question of 5 batch analysis for establishing chemical equivalence does not arise because CIBRC guidelines require only single batch analysis for comparison and question of interpretation of AMES result is always guided by end point as per FAO. <p>3. So far as low dose is concerned, the test guidelines says to select either top dose 5000 microgm if no precipitation and if researcher finds technical difficulty such as clumping, precipitation due to factors attributable to be test chemical, he has liberty to choose any low dose to 5000 micro grams and go down to that as long as he is comfortable with a non-precipitation concentration. RC noted that factors such as precipitation, solubility, cytotoxicity are confounding variables in the AMES test which are likely to be influenced by culture conditions and nature of compounds, therefore test conc. selected for study are best judged by investigator and hence no point to point comparison between study of 9(4) and reference study may not be possible and feasible. Recognizing these variables, FAO recommends that results are compared by end point that is mutagenic or non mutagenic.</p> <p>4. During presentation by industry representatives in 420 RC, new facts mentioned above came into notice of the RC. The RC directed to put up all such cases in RC for deliberation, which have not been put up with details so far.</p> <p>In light of above discussion and facts, RC decided to approve all five cases and further directed that in the recent past if such cases have been rejected because of lack of clarity on technical points may be brought for reconsideration as a part of natural justice.</p>
