The applicant further explained that the degree of hazard posed by Dimethanamide technical and Dimetanamide –P technical are almost similar as shown by repeat studies which were restricted to certain parameters only and requested for acceptance of studies particularly on long term (carcinogenicity studies on rat and mice)and effect on reproduction studies ,subacute dermal which they have carried out on Dimetanamide technical .</p> <p>The expert on toxicology dealing this case apprised RC this case would be revisited on its turn and sought permission from RC to allow to discuss with authorized representative as and when need arises and can take undertakings on any issue related to data, as data on teratogenicity on rabbit, and 90 days study on dog have also not been submitted on Dimethanamide-P compound. Applicant accepted and informed that they have already submitted the teratogenicity studied on rat and rabbit on Dimethanamide technical (on racemic mixture), and carried the study on teratogenicity on rat only for Dimetanamide - P compound and again emphasized that it was acceptable to other countries where it has already been registered .On dog study ,applicant apprised that they are in possession of one year chronic dog study but it is on Dimethanamide technical and they will share that study as well. The Toxicity Expert also apprised that there are still data gaps on toxicity studies pertaining to avian species . The studied on metabolism will have to be critically assessed.</p>

These LLIN are being used for the control of malaria vector in a very systemic and planned way for different kind of end-users/locations and has not been allowed for open sale even , their bio-effective studies are carried under the supervision of ICMR ,India and they and RC found them effective against malaria vector solely for Public Health Program only.
