<b>3.1</b>	<b>Report of the sub-committee constituted under the chairperson Dr. Vandana Tripathi, Project Coordinator, AINP, IARI, Pusa New Delhi by its 442<sup>nd</sup> meeting vide agenda item no. 3.1 to frame the modalities of 5 batch analysis</b>
	The RC in its 427 <sup>th</sup> RC meeting while deliberating an agenda item on minimizing compliance burden on industry/business under ease of doing business under S. No. I (d) on requirement of Bio efficacy data for registration of Technical decided as under: <i>“Approved subject to condition that bio-efficacy data is not required for registering</i>

*technical where formulation folder with Bioefficacy data is submitted for registration. However, if application is submitted for technical alone then chemical equivalence (through five batch analysis) with already registered technical is required to get this exemption.”*

Therefore, the RC in continuation of the above decision decided to constitute a sub-committee in its 442<sup>th</sup>& 443<sup>th</sup> meeting to prepare the protocol/Modalities for the 5-batch analysis in reference to the decision taken in 427<sup>th</sup> meeting.

The sub-committee submitted its recommendations which are as below:

1. Globally 5 Batch Analysis Report is always “location specific”, hence the sample synthesizing/manufacturing shall be done in the R&D premises of the applicant.
2. The applicant must maintain the laboratory data/evidence of manufacturing/synthesizing the 5 samples used for generation of data. (Data means entries in log book only of the laboratory proving when the sample was manufactured,)
3. The samples have to be drawn from the Pilot Plant of the applicant by the officers nominated by the PPA. The capacity of the Pilot Plant shall be 1 kg minimum (Output of 1 Kg minimum). No sample can be drawn from the Laboratory where Pilot Plant is not available or not used for these purposes.
4. The sample size should be more than 300 gm x 3 from each batch.
5. Two samples have to be drawn from two batches (One from each batch).
6. The above both the samples shall be analyzed and verified in the Central Insecticides Laboratory, Faridabad
7. The procedure of drawing sample shall be as per the decision of RC in its 442<sup>th</sup> meeting.
8. The analysis by CIL shall be adhering to confirming the mass balance (minimum required 98%). The analytical result of the total analysis (A.I. + Impurities) should not be less than 98%.
9. If there are not any other components observed, but the sum is inferior to 98%, an analysis of ashes and humidity must be performed, if declared in Chemical Composition.
10. Unidentified impurities must not exceed 2% and individual impurities must be below 0.1% w/w.
11. All impurities above 0.1% w/w must be analyzed and quantified.

RC has now decided to invite comments from stakeholders within 30 days from the date of publication of these minutes.

<b>6.45</b>	<b>Consideration of an application of M/s Panoli Intermediates (India) Pvt. Ltd., for grant of registration for indigenous manufacture Nitrobenzene technical 99.90% w/w min. u/s 9(3) TIM.</b>
	<p>RC deliberated the agenda. It was specifically observed that the applicant has submitted all the toxicological studies data of Nitrobenzene Technical as per the guidelines of CIB&amp;RC except subacute oral toxicity study data in dog and toxicity study data in livestock and requested to waive off these two studies for grant of registration. Further, the applicant has submitted detailed peer reviewed literature with complete data/information on carcinogenicity study in rat and mice and teratogenicity in rabbit.</p> <p>The agenda was discussed at length and it was found that the Nitrobenzene Technical is used globally and registered in several countries where International Regulatory Authorities like EPA and ECHA have allowed registration without requirement of sub acute toxicity data in dog. Further, no data on sub acute toxicity on dogs is available in public domain and so far no report on adverse effects on dogs of Nitrobenzene are published. The Committee for the Purpose of Control and Supervision of Experiments on Animals (CPCSEA), New Delhi does not generally permit conducting of toxicity studies in dogs, as it is very tedious task to rehabilitate a dog at the end of toxicity study. RC also deliberated regarding waiver off the toxicity study in livestock. It was observed that livestock are not likely to be affected due to nitrobenzene in their lifetime and therefore, there are no chances of toxicity occurring in livestock. So the toxicity data livestock on nitrobenzene may not be required in the present case. Further, the applicant has submitted full peer reviewed information / literature on carcinogenicity in rat and mice as well as teratogenicity in rabbit which clearly provides</p>

	<p>complete information for Nitrobenzene Technical.</p> <p>After the detailed deliberations based on the above justifications, RC decided to allow the waiver of toxicity study in dog and livestock, and accepted the peer reviewed information for carcinogenicity in rat and mice and teratogenicity in rabbit. However, this will be taken as a unique case and not as precedent later on and each case in future will be decided on its own merits.</p> <p>So after the due deliberations, RC approved for grant of registration for indigenous manufacture of <i>Nitrobenzene technical 99.90% w/w min.</i> u/s 9(3) of the Insecticides Act, 1968 in the category of Technical Indigenous Manufacture (TIM).</p>
