	It was specifically observed that the applicant has submitted all the toxicological studies data of Dimethenamid-P and dimethenamid racemic Technical as well as

	<p>formulation except toxicity data to earthworms for the formulation for which the applicant has submitted the proper justification for exemption of toxicity data of formulation to earthworms. It was found that the calculated toxicity end point of the formulated product (saflufenacil and dimethenamid-P) to earthworms is 517.56 mg/kg indicating it to be mild toxic to earthworms. In addition, as per the guidelines in 2016, toxicity data to earthworms was not required. Therefore, the exemption to toxicity data to earthworms was allowed in the present case. Various toxicity studies data submitted by the applicant for dimethenamid racemic (50/50 mixtures of S and R isomers), where R isomer is inactive as a pesticide, have been critically examined for all acute toxicity, short term toxicity, genotoxicity, developmental toxicity and long-term chronic toxicity and carcinogenicity in rat and mice. It was found that it shares the same toxicological profile observed at comparable dose levels and evaluated on the basis of bridging concept (data bridging/ isomer data bridging) and observed that the conclusions drawn both for dimethenamid racemic and dimethenamid-P are equivalent entities with regard to toxicological profile and thus, it emphatically proves to accept the toxicity data of both dimethenamid racemic and dimethenamid-P on the basis of bridging concept in the present case which has been accepted globally. Dimethenamid-P is also registered across worldwide in more than 60 countries including North America, Central America, Asia and Africa where bridging concept have been accepted for registration.</p>
